COMPREHENSIVE IT SUPPORT WITH AN EMPHASIS ON SECURITY

As companies become more reliant on technology, they also become more vulnerable. A proactive security strategy is a must for businesses of all sizes.

There was a time in the not-so-distant past when network security was relatively straightforward. Companies could install a firewall and be fairly confident that it would protect their sensitive corporate IT assets from the outside world. Computer viruses, while certainly an annoyance, weren't nearly as widespread and insidious as they are today, making antivirus software good enough to deal with the most common threats.

Things have changed. While technology continues to provide exciting new ways to communicate and share information, it also introduces startling new challenges and vulnerabilities for companies of all types and sizes. Information theft, regular virus outbreaks, unauthorized user access and website defacement are just a few of the painful and costly problems that can come as a result of not having an adequate security program.

A reactive approach to network security, or one that is based on "cleaning up the mess" after the fact, is no longer good enough for most companies. Indeed, many organizations are no longer in business or have been seriously crippled because they addressed the issue of security only too late. The fact is, a proactive strategy based on prevention is a requirement for the modern business. The real question is, how? There are a dizzying number of technologies on the market today. Which are the best? Which ones will work together? And finally, who has the knowledge and expertise to deploy and support such a complex solution? Just as importantly, how much will it cost to implement & maintain? Even the best solution is worthless if it's too expensive to buy and keep.

Network Security: What You Should Know

Organizational losses continue to rise as attacks become more frequent, sophisticated and malicious. Here are just a few examples:

Computer virus attacks cost global businesses an estimated \$55 billion in damages in 2003, a sum that will rise in 2004.

—Trend Micro Inc.

Last year, there was almost one major virus attack every month.

—REUTERS

Over 25% of attacks today are coming from Web pages and downloads.

—Fortinet Inc.

Fully 45% of the free files collected via KaZaA, the most popular program for downloading free files and music, contained viruses, Trojan horse programs, or backdoors.

—TruSecure Corporation

50% to 75% of all commercial websites can be hacked.

—Gartner Group

Overall things got worse in 2003. The total number of viruses reported 'in the wild' increased by 24%.

—TruSecure Corporation

The number of new viruses discovered every month continues to increase. In the last quarter of 2001, the Sophos virus lab was processing around 1200 new viruses each month.

—Sophos

"We have internal employees who are responsible for our networks, but it is not their full-time job. Avantage's Managed Security Program provides a perfect balance between IT outsourcing and internet security. We rely on Avantage to keep our network safe from virus and intrusion threats and call on them to help with the day-to-day administration issues that we can't resolve ourselves. We do what we can and rely on Avantage for the rest."

Introducing SecureIT® by Atvantage

Our comprehensive Network Security Program, SecureIT®, is a professionally managed solution that allows organizations of all sizes to access and leverage the same state-of-the-art technologies used by companies like Toshiba, Gold's Gym and Overstock.com, at a fraction of the cost. Not only do we give you world-class antivirus protection, one of the industry's toughest firewalls, and secure network access for remote users, we also manage the entire solution for you. We install it, we monitor it, we maintain it. Have a partner who needs remote VPN access to your network? Call us—we'll make the change for you. Want to keep employees away from certain websites? No problem—we'll take care of it. Think maybe one of your users brought the latest virus into the office with him on his laptop? Give us a call, (if we haven't called you first!) and we'll deal with it. After all, you already have enough to worry about. Let us handle the intricacies of network security, so you can focus on the intricacies of building your business.

Features included with all Atvantage SecureIT® Packages
